SUMMARY

BS Information Technology graduate with a practical foundation in Python programming, SQL, database concepts, and data processing. Have worked with SQL and Docker in practical settings, and have familiarity with PostgreSQL and ETL concepts. Academic project experience includes preparing, cleaning, and transforming structured datasets for analytical and machine learning workflows using Pandas, NumPy, and Scikit-learn. Interested in building reliable data workflows and developing further expertise in data pipelines and data engineering.

CORE SKILLS

Languages: Python , SQL
Data Engineering & Analysis: ETL pipeline design, Data Cleaning, Data Preprocessing, Data Transformation, Missing Values Handling, Feature Scaling, Encoding Categorical Variables, Feature Engineering, Rest API integration, Database Management
Framewrok & Libraries: FastAPI, Flask, NumPy, Pandas, Scikit-Learn, TensorFlow, Keras, Pytorch
Databases: PostgreSQL, MySQL, Firebase, Excel data handling
Cloud & DevOps: Docker, Docker Compose
Visualization Tools: Matplotlib, Seaborn
Machine Learning & AI Concept: Supervised Learning, Classification, Regression, Model Evalution, Deep Learning, Natural Language Processing (NLP)

PROFESSIONAL EXPERIENCE

FAMORA (Robot based mental wellness companion)
- Python | Scikit-learn | Pandas | Data Visualization
- Collected and organized questionnaire responses from university students to create a structured dataset for analysis.
- Prepared data for modelling by handling missing values, applying feature scaling, and encoding categorical variables.
- Developed a machine learning workflow to classify depression, anxiety, and stress severity levels from questionnaire data.
- Used data preprocessing and visualization techniques to support model development and evaluation.

Crop Recommendation System
- Python | Pandas | Scikit-learn
- Processed agricultural datasets including soil nutrients, pH levels, temperature, and rainfall data
- Applied feature engineering and data preprocessing techniques
- Implemented and compared multiple classification algorithms

Palestine Casualty Data Analysis & Body Count System
- Python | Data Analysis | Data Cleaning | Data Processing | Database Management.
- Developed a data driven system to manage and analyze casualty related records.
- Worked on collecting, organizing, cleaning, and processing structured data.
- Used Python based data processing techniques to analyze casualty records and generate meaningful summaries.
- Focused on data accuracy, record management, and structured information handling.
- Designed the system to present processed information in an organized and understandable format.

Student Performance Prediction & Factor Analysis System
- Python | Machine Learning | Pandas | NumPy | Data Preprocessing | Feature Analysis.
- Developed a data driven system to analyze student academic performance and identify influencing factors.
- Processed student related datasets and performed data cleaning and preprocessing.
- Explored relationships between academic performance and relevant student factors.
- Applied machine learning concepts to analyze patterns and support performance prediction.
- Prepared structured data for analysis and model development.

Flight Management & Database System
- SQL | Database Design | Relational Databases | CRUD Operations | Data Management.
- Developed a database driven application to manage flight related information and records.
- Designed and worked with database structures for storing and retrieving flight information.
- Implemented data operations for managing flight schedules, passenger records, and booking information.
- Used SQL queries to retrieve, update, and manage structured records.

- Focused on data consistency, organized storage, and efficient database operations.

School Student Daily Attendance Management System

- Python | SQL | Database Management | Data Processing | Record Management.
- Developed a system to maintain and manage daily student attendance records.
- Organized student information and attendance data in a structured format.
- Implemented record management operations for marking, updating, and retrieving attendance.
- Used database operations to maintain attendance history and support record tracking.
- Focused on reducing manual record handling and improving data organization.

EDUCATION

Bachelor's Degree in Information Technology (IT) University of Sialkot Feb 22 — Mar 26

- Database, Data Structures Algorithms, Statistics, Artificial Intelligence, Machine Learning, Deep Learning, C++

ACHIVEMENT

Certifications & Learning

- Completed Machine Learning coursework and practical implementations
- Proficient in Python programming for data science applications
- Data Visualization Fundamentals

LANGUAGES

English (Professional working proficiency) , Urdu (Native)
